Make complex workflows simple

Print management solutions are at the heart of every model. Intelligently automate, securely print and personalise workflows with out of the box solutions.

Exceptional quality and simple scalability, all in one colour laser printer range

“I’m delighted to be able to introduce our next generation of colour laser devices. Through five years of significant investment and enhancements in research and development, we bring to you a premium A4 colour laser range. This range builds upon our existing award-winning SMB portfolio, offering a line up that has been designed and engineered to meet the needs of enterprise business.”

Chris Marshall,
Director, business printing and solutions,
Brother International Europe

Our latest colour laser range is designed to deliver the professional performance your business needs – with high-speed, glossy colour printing you can rely on, professional grade security features as standard and the flexibility to tailor your device to suit you and your business.

Solutions enabled

Print management solutions are at the heart of every model – enabling you to automate workflows and improve efficiency and security. You have the option to upgrade your device with intelligent Brother and third-party solutions, including integration with industry leading providers Kofax and YSoft. This gives you complete flexibility in how you manage, secure and control your documents.

Premium colour

Our most advanced colour printing technology is guaranteed to make the right impression when it counts, with vibrant, professional colour prints and accurate digital capture using advanced image processing. The highly efficient fuser unit works seamlessly with the next generation toners. Producing a premium, glossy finish with high colour density to each document, every time.

Secure by design

As working conditions change, security is more critical than ever. That's why each single function printer and all-in-one device come equipped with a range of features that deliver enterprise level security.

To safeguard data against loss or theft, Transport Layer Security (TLS), Secure Socket Layer (SSL), IPsec and Scan to SSH Server (SFTP) are supported, so that your most confidential files transfer using up to 256-bit encryption during transmission over the network. Using automatic intrusion detection, devices recognise abnormal activity and take preventative measures in order to ensure the device remains secure.

In addition, identity management and access controls help to reduce risk with selective user restriction, only allowing authorised employees or groups to get instant access to specific settings and functions they need.

Engineered for performance

The robust design, upgraded memory and long-life components provides confidence your device keeps on performing without interruption.

With fastest in class 2-sided scanning speeds of up to 100ipm, physical documents are easily transformed into digital files with precision clarity.

Twin laser technology enables productivity to be greatly improved. With a first print out time of less than 10 seconds and a 2-sided print speed of up to 40 pages per minute, you are never kept waiting for that important document.

Contract printing that looks after itself

Managed print services (MPS) enable you to get the best out of your devices. That's why each printer has been designed with MPS in mind.

MPS helps to save you money, with flexible payment options and lower ongoing running costs. You'll also get more control with real-time reporting tools and higher efficiency as workflows are streamlined and easily scalable. The real-time data also enables you to monitor your environmental impact, helping your business to meet its sustainability goals. The high yield in-box toner allows you to print up to 12,000 pages in black and 9,000 pages in colour, giving you optimal efficiency right from the first page. Plus, automated benefits such as monitoring print behaviour and toner replenishments help to optimise your print experience, while innovative security protects against any threats you may face. And it's all really simple – once set up, you can sit back and let it do the heavy lifting for you.

Unlock new possibilities with our range of business solutions*

Workflow solutions

Personalised printer touchscreen

Make time-consuming and complicated document filing and archiving simple with Custom UI. Create specific workflows for frequent 'scan-to' destinations on the fully customisable touchscreen, enabling your files to be saved to the correct location in one touch.

Automatically route documents with barcodes

Reduce the labour-intensive task of scanning many documents, saving and then renaming files. Barcode Utility enables documents that have a barcode to be scanned and saved to the required location, automating the separation of a batch of documents and routing each individual file to the designated folder on your network.

Printing barcode fonts with ease

Brother's Barcode Print+ enables you to easily print barcodes from your Brother printer. You simply supply your printer with the information for the barcode, the barcode is then printed exactly as it should appear. The quality of the barcodes reflects Brother's exceptional printing standards. So, they are read with ease by a variety of barcode readers.

Security solutions

Print secure documents from a specific printer

Secure Print+ enables you to print your confidential business documents securely. Your sensitive documents are only printed when you're ready to collect them from the printer. Only authorised staff can collect their documents and users are easily added and removed.

* The above solutions do not come as standard on the device. For more information on how to access these solutions please contact your local dealer.

Device management

Remote device support

Remote Panel operates in real-time, offering a complete interactive interface to your printing device. Your IT provider can access the full functionality of your printer, to quickly diagnose and resolve any issues and enable settings to be changed as if they were physically standing at the printer.

Diagnostic reports for IT administrators

Request Help is a Brother service that enables your IT administrator or service provider to easily troubleshoot errors that may occur. You simply press the 'Request Help' icon on the control panel and a full diagnostic report is created and automatically emailed to your IT administrator.

Order supplies from your printer

Effortlessly order your toner cartridge supplies directly from your printing device, with the Order Supplies service. In one touch, your selected supplier will be notified when you require replacement supplies and arrange delivery, ensuring you never run out of toner when you need it.

*The above solutions do not come as standard on the device. For more information on how to access these solutions please contact your local dealer.

Accessories

Flexibility that saves you time

Businesses are constantly evolving to stay ahead. Our colour laser printer range allows you to easily adapt as your business grows – adding productivity boosting features for optimal performance. Whether you need a mailbox to sort your printed documents or a staple finisher to automatically staple your documents, your printer can be easily transformed to help improve business productivity. The paper tray configurations available for all models offers practical functionality for your day-to-day printing needs, saving you time and money without needing to invest in multiple devices.

Our world class toner remanufacturing programme helps to reduce waste extending our product lifecycle and reducing environmental impacts.

Dedicated to remanufacturing and reducing CO²

We're regularly investing in more sustainable products by working towards the circular economy principles of reduce, reuse, refurbish, repair and recycle.

Dedicated remanufacturing facilities support our toner cartridge return and recycle scheme. Each remanufactured toner cartridge saves on average 2.05kg CO². Globally, last year, we remanufactured 2.59 million cartridges achieving a reduction of 5,300 tonnes CO². With this, not only is diversion from landfill assured, but your Company's carbon footprint is reduced.

COOL EARTH

To complement the toner remanufacturing program, we have been partners with rainforest charity Cool Earth, for over a decade. Together we back local people to protect rainforest from deforestation. So far working with our customers, Brother and Cool Earth, support seven communities in the rainforests of Papua New Guinea and the Peruvian Amazon that are custodians of over 70,000 hectares of rainforest, over 23,000,000 trees and over 37 million tonnes of carbon stores.
